EQPlan® A Visual Planning Tool
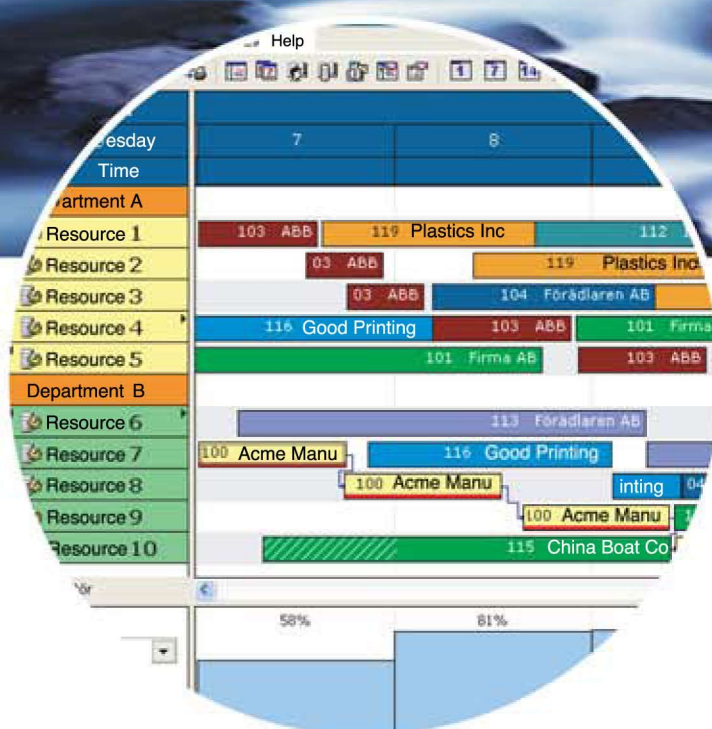

In Our World You Control The Flow

EQPlan

Is easy to implement & use

Gives you exact deliverytimes

Makes decisionmaking easy

Fits most companies

Shows production flow Graphically

Interactive

EQ Plan is an interactive planning software that displays your production process graphically.You can at any moment see what impact any changes in the plan have on your production flow and resource scheduling.

With "Drag & Drop", and intuitive, easy to understand commands, EQ Plan gives you constant up-to-date information about the status of your orders and resuource utilization.

EQ Plan gives you better control, increased efficiency and smarter capacity use, leading to shorter deliverytimes, flexible production and better competitiveness.

Simulate & Analyze

EQ Plan contains numerous functions that directly influence production orders and delivery times. Updates / refreshs of the plans are fast and simple while giving you full control over the planning function.

EQ Plan also gives you the ability to simulate different scenarios while filtering out specific data you want to analyze/highlight further. You will be alerted in plenty of time if deliverytimes risk being jeopardized. You can test and try different scenarios - make a "what-if" analysis - before taking the final planning decision.
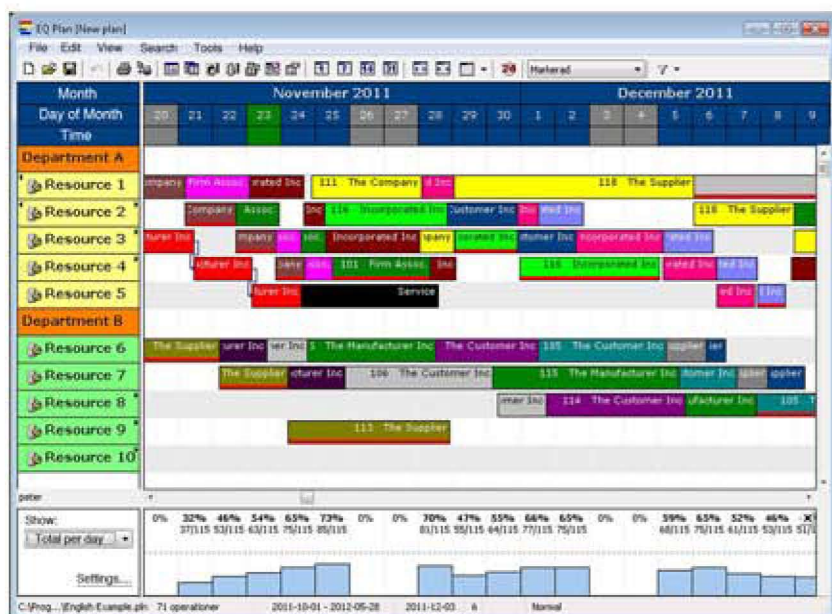

User Friendly

Simplicity is a keyword that best summarizes EQ Plan. No need to have in-depth computer knowlege in order to use the software. This is what many EQ Plan customers have noted - it is a powerful tool that is easy to implement, easy to learn and easy to use.

EQ Plan Viewer

With EQ Plan Viewer the user can report status, view current plans, orders and schedules but not make changes to the plan. EQ Plan Viewer gives you a simple and cost-efficient tool to distribute a graphic view of the production plan to the whole organization.

Connect to Business Systems, ERP, MRP or use as Stand-Alone

EQ Plan works as a stand-alone application or connected to many existing ERP, MRP and business solutions. We also tailor-make connections between EQ Plan and custom made business systems. Contact us for more information.
